

Sagar Parab

DEVOPS ENGINEER | LINUX ADMINISTRATOR | CI/CD AND CONTAINER AUTOMATION

Bengaluru, India | sgrp9801@gmail.com | +91 8956002275 | github.com/eagar1089 | LinkedIn | Portfolio

Professional Summary

DevOps-focused engineer with 2+ years of Linux administration experience across production and staging environments. Hands-on with CI/CD automation, Docker-based delivery, AWS EC2 deployments, Bash and Python scripting, Nginx, MySQL, monitoring, and operational troubleshooting. Builds reliable delivery workflows with testing, vulnerability scanning, health checks, and rollback controls. Currently expanding practical knowledge of Kubernetes, Terraform, and cloud-native observability.

Technical Skills

CI/CD: Jenkins, GitLab CI/CD, GitHub Actions, pipeline design, rollback workflows

Linux and Web: RHEL, Ubuntu, CentOS, Nginx, PHP-FPM, MySQL, Node.js

Automation: Bash, Python, backups, logs, deployment scripting

Developing Knowledge: Kubernetes, Terraform, infrastructure as code concepts

Containers: Docker, Docker Compose, image builds, health checks, Trivy scanning

Cloud and Monitoring: AWS EC2, Prometheus, Grafana, Node Exporter

Development: PHP, JavaScript, React, Next.js, Flask, MongoDB, Git

Practices: SDLC automation, incident support, observability, least privilege

Professional Experience

Justdial Pvt. Ltd. - Linux Administrator

Jul 2026 - Present | Nov 2021 - Feb 2024

Bengaluru, India | Rejoined after completing B.E. Computer Engineering

- Administer Linux application environments across Ubuntu, CentOS, and RHEL, supporting Nginx, MySQL, Node.js, and PHP-FPM services in production and staging.
- Automate backups, log rotation, recovery, and recurring operational workflows with Bash and Python to reduce manual administration.
- Build and maintain Jenkins, GitLab CI/CD, and GitHub Actions workflows for repeatable application build, validation, and deployment processes.
- Tune and troubleshoot Nginx, PHP-FPM, MySQL, permissions, logs, and application services during deployment and incident resolution.
- Develop internal monitoring and web tools, including the current Distributed Cron Monitoring Platform and earlier F5 LiveOps, Server Inventory, and Infrastructure Data Collector projects.
- Collaborate with development teams to diagnose production issues and connect application behavior with operating-system, network, and service-level evidence.

Selected DevOps Projects

Automated CI/CD - 2-Tier Flask Application

Flask, MongoDB, Jenkins, Docker Compose, AWS EC2

- Containerized a two-tier application with persistent storage and health checks, then automated image build and deployment through Jenkins.
- Reduced a 20+ minute manual deployment process to under 4 minutes through pipeline automation.

Monitoring and Observability Stack

Prometheus, Grafana, Node Exporter, Docker

- Deployed a containerized monitoring stack and dashboards for CPU, memory, disk, network, and service-health visibility.

CI/CD Pipeline Hardening

GitHub Actions, Docker, Trivy

- Designed a seven-stage workflow covering linting, tests, image build, vulnerability scanning, staging, smoke tests, and production promotion.
- Added health-check rollback and blocked deployment when critical container vulnerabilities were detected.

Digital Memory Jar

Next.js, React, Node.js, Docker, GitHub Actions

- Built a full-stack journaling application and automated its Docker build and delivery workflow with GitHub Actions.

Education and Certifications

B.E. Computer Engineering - University of Mumbai

Jul 2023 - May 2026 | GPA: 7.5

Diploma in Computer Engineering - University of Mumbai

2019 - 2021 | 86.8%

Certifications

RHCSA; Docker and Kubernetes Hands-on

Focus: SDLC automation, containers, monitoring, incident response, deployment security, and infrastructure automation.
